# No-Age Plus

## Anti-Corrosive and Protective Aerosol Treatment for Condensers and Evaporators – Ready to Use

The outdoor units of the Air Conditioning & Refrigeration Systems are constantly subjected to the aggression of weathering, humidity, smog, salt, sand and dust that inevitably trigger a corrosion process of all their components.

**What is it? NO-AGE PLUS** is a liquid aerosol to be applied to the external unit (to the condenser and to the shell) after the cleaning operation. Once applied, it creates a thick and transparent protective film, resistant to moisture, smog, salt, sand and dust.

**How to use it:** Carefully clean the areas to be treated with an alkaline or neutral detergent. Remove any residues that could impede the correct adhesion of the product. Spray a layer of **NO-AGE PLUS** on the interested surfaces.
Wait 10 minutes or until the product is completely dry.
**NO-AGE PLUS** is a product for professional use.
Use gloves and glasses during application.
